# SIMPLE FPS CONTROLLER v1.2

Thank you for downloading **Simple FPS Controller**! In this pdf you will find some more information about this wholesome asset!

## LICENSE:

The license is [Attribution 3.0](). Attribution 3.0 gives you the opportunity to do anything with this asset – you can change it, use it for any kind of purposes. However there are two exceptions – you **must** give me a credit and you **must NOT** add additional restrictions.

## NEW:

- More weapons: Ak-47 and M4A1
- Health and health bar
- Pills – by taking a pill you have a chance either for healing or confusing effects
- Animated weapon switching
- Inventory
- Pick-up + Drop system
- Level

## FIXED:

- Weapon switching
- Grappling hook now works on non-static objects
- Better scene transition

## BUGS:

If you find any bugs, you have an idea or you want to ask me something, just contact me using the contacts beneath.

# PERFORMANCE:

All of the tests were on this PC configuration:

**CPU**: Intel Core i5-6400

**GPU**: NVidia GTX 750Ti

**RAM**: 16GB

*All of the tests went smoothly!*

# RENDERING PIPELINE:

The asset was made on the **standard rendering pipeline**.

So if you want to use this asset on **HDRP** or **URP** you will have problems with Post-Processing. All of the scripts were made for Post-Processing Stack v2 and not for built-in Post-Processing.

*If you don't know how to fix this issue you should contact me using the contacts form beneath.*

# NOTES:

In most of the scripts that are placed either on the player or the camera I have declared a static instance of the object. Most of the other scripts are using these static instances. I made it because I want a fast access and I don't want these scripts to be used somewhere else! That means that you can add *GrapplingHook.cs* to **ONLY** one object. And a thing that is also very important is that all of the scripts work together.
